

CONTACT SPORTS WILL CHANGE YOUR CHILD'S BRAIN

NOW WE KNOW

In collision sports, brain trauma is happening in almost every play and in practice. It doesn't take much to cause damage to the human brain, especially in someone under the age of 18.

People whose brains have sustained too many bumps can present themselves as having mood disorders, ADHD, irritability, headaches, suicidal thinking, addiction issues, and problems with schoolwork and life. Sometimes these symptoms take years to present themselves.

You can't un-hit a child's brain.

CHOOSE BRAIN-SAFE SPORTS!
