

CONTACT SPORTS WILL CHANGE YOUR CHILD'S BRAIN

HAVE YOU READ THE WARNING LABEL ON A FOOTBALL HELMET LATELY?

It will tell you that a helmet cannot protect a child from concussions or brain injury. A helmet will not protect against developing CTE from small repetitive hits.

Studies have proven that just one season of football can change the white matter in a child's brain.

It is time to take action and protect the precious brains of our students.

CHOOSE BRAIN-SAFE SPORTS!
